

Oxygen Concentration Plant at TUTH

The new oxygen plant that was just installed by Medioxy PVT. LTD

As per the information acquired from Mr. Chanchal Joshi, Operation in charge of Oxygen plant the Oxygen plant that has arrived is in full function and is running smoothly. He also answered the following question

How will common people benefit from it?

All the effort that has been put to bring this oxygen plant is to help the common people. Mr.Chanchal didn't know the charge that was taken for the oxygen but as per the earlier information that we have got from Mr. Bimal Tamang, oxygen plant operation and maintenance department, said "Teaching hospital delivers the oxygen supply to the patients almost free of cost which is quite costly in other private hospitals".

What is the administration or Doctors thinking?

This is the 3rd oxygen plant that is installed in teaching. As there were only two oxygen plant in teaching it would cause a lot of load to it but after this 3rd oxygen plant it can properly provide oxygen all over the hospital. They run the three oxygen plant turn by turn so that it does not load other oxygen plant. It has been a massive help as they can continuously provide the patient with oxygen. The administration is happy that finally the plant has been installed and it will be help the whole of Teaching hospital.

Which place is the oxygen provided?

The lines from the oxygen plant are all over the hospital but the oxygen plant which is installed will supply oxygen to Operation Theater, Intensive Care Unit, and Medical Intensive Care Unit of the hospital.

How much oxygen it will generate?

As of now the oxygen plant has 95% O₂ level as said by Mr. Chanchal Joshi.

Regarding the payment to be done,

The vendor Medioxo PVT. LTD have given us a letter regarding payment to be done but as per the agreement signed on 26th November, 2017 they should have brought the oxygen plant and put it into function within 150 days that is 23rd April, 2018. They have constructed Oxygen plant and put it into function on the date 4th November, 2018 so they are 6 months late to install the Oxygen plant. So, as per the agreement 0.05% of the agreed amount will be deducted every day until the installation and functioning of the Oxygen plant.

So, we are going to send a letter to the technical committee to ask about if the requirement of the oxygen plant has reached according to the set technical specification and what should be the process regarding the fine that the oxygen plant vendor have to pay.
